

Just Try It!

Students Get Into The Knack

Students at AHS "get the knack" in home ec., industrial arts and art.

Home economics offers classes that will teach you everyday needs, such as foods, personal and family living, and child development. Mrs.

Bongard, home economics teacher, states that her favorite class projects are planning a wedding in family living and working with the elementary children in child development. "It's nice to see my students communicate with the little kids."

Industrial arts teacher, Mr. Schestag, states that his

favorite class to teach is drawing. "I like to draw and see things actually constructed."

Industrial arts offers classes that teach basic maintenance and repair.

Art is a class that allows students to use their talents in drawing and designing. It offers classes such as ceramics, handicrafts, drawing and painting. Mrs. Gearhart, art teacher, feels that the students are allowed to be creative and express themselves without the boundaries that more formal classes have in art classes. "It's fun to see the kids that say they can't do it actually do it."

"PAINTING MRS. BONGARD'S OFFICE was a lot of fun," reflects Don Wallen. Mrs. Bongard found her office a more cheerful place after some of the art students finished their decorating project.

"MAKING THE PIECES FIT TOGETHER was the hard part," commented Angela Felton. The foods class constructed a house from gingerbread, M & M's, vanilla wafers and white frosting. Angela Felton, Sherry Kral and Chaunda Shaw worked over a week on this project.

BASIC MAINTENANCE AND REPAIR are what Jason Saxton and Warren Faber learned in Small Engines. Students and teachers bring their cars into class for minor repairs and upkeep.
