Kids Do It All

Teachers introduced new and exciting ways for students to learn at Ashley High. What did they do this year?

First, the seventh graders who took home ec all had to learn how to thread and use a sewing machine properly. They also got to cook a variety of good things to eat.

Meanwhile, the eighth graders were learning about physical fitness by way of the President's Fitness Test. Whether it was the shuttle run or the mile run, these kids learned that physical fitness is something that is hard to attain but nice to have.

For the freshman class it was the space tomato lab in biology class. These students planted both tomato seeds that had been carried into space by one of NASA's space shuttles and seed that had come from plants that had been grown on the earth. The class watered and monitored the growth to see if being in space had any effect on their growth.

KILLER TOMATOES OR INNOCENT PLANTS? That's what Nikki Melvin, Shelly Anderson and Robin Woody prepare to find out as they water tomato plants that were grown from seeds that had spent a year in space on the space shuttle.
