

SHAKE THAT BODY... Denise Garcia, Tracie Turner, Shari Drummond, and Beth Schulz get down in American History. The project was designed to learn about women in the 1920's.

What do you get when you have a dead frog and people dancing? Right... science and social studies classes. "I like Mrs. Martinez's classes; she always has something interesting for the class to do," commented Shari Drummond.

The science and social studies classes have to be interesting in order to keep students wanting to learn, and these classes sure do it! For example, the American History class learned just how women (and others!) danced in the 1920's. And, of course, there's that favorite sing-along of Civil War songs, accompanied by Mrs. Martinez and her guitar.

One of the projects in Explorations in Science is dissecting a frog. "It was really interesting because I had never seen the inside of a frog before," junior Amy Strouse said.
