

S. Bornemann

HUH? Mr. Wayer explains geometry to Denise Garcia and Amber Polash. Most students found the class to be a challenge, but good to prepare for the future.

Business and math...boring subjects, right? Well, not exactly. Teachers spend a lot of time trying to make class more fun and interesting for the students involved, "I try to think of things in my lessons that will apply to everyday life. School, sports, and things going on in the world are things that students relate with. I ask them how they would figure it out if they needed to," commented Miss Kristy Yodzevicis.

Some other things are done by teachers to make class a little brighter. Making jokes lightens the atmosphere and leaves everyone a little less tense. Fun extra credit problems help your grade and entertain your mind.

So, if you think business and math are boring subjects, try taking a class. Maybe it will be more interesting than you figured. Or (heaven forbid!) fun.

go
figure!

Everyone knows that algebra and bookkeeping are a drag, yet... business and math made fun?
