

HEY... IT'S FUN

Science and math... everyone knows they're some of those (ho-hum) required classes. You know, you have to take them so you try to get them out of your schedule as soon as possible. There are those, however, who disagree with that viewpoint. One of those is math teacher, Mr. Brian Gavenda, who maintained, "Math is the foundation of all that is good."

One might expect the math and science teachers to feel that way, but, strangely enough, others not so biased also agree. Sophomore Stacy Densmore commented, "I like both science and math because they're both extremely challenging. This will also help me in my future planning in

the medical field."

Science also comes in for its share of kudos. Although most students are intimidated by the prospect of memorizing the chart of elements, categorizing insects, or the infamous physics projects, Jesse Diffin had a refreshing perspective: "I like chemistry because you can put different chemicals together and see what happens!"

And, of course, there are those people who have spent too much time watching old horror flicks. You know, the ones where some mad science

manufactures a grotesque monster or blood-sucking aliens invade the earth. Those are the students who flock to classes like Explorations in Science, eagerly awaiting their chance to slice open a frog and find out what makes it jump. "I like science because I get to dissect things and blood doesn't bother me," raved Amy Walter.

There you have it... the science and math people. Hmm... a strange lot...

HMM Aaron Grollimund and Joe Shaw study for their Algebra II exam. "I like math, but that exam was really hard,"

stated Joe. "I hope I did good on it." Both Aaron and Joe are A students, enjoying a high grade point average.
