

LOOK TO THE FUTURE

If these walls could talk, maybe they could explain what Life Management and Technology have in common. "Technology is one of the classes that you can actually apply to your life one time or another in the future," stated **Lucas Studt**.

In today's society the advancing key point is technology. "The best part about technology is mastering whatever is put in front of you. For instance, in Graphic Arts we got to design ads," commented **Nicole Gilbert**.

Technology is a constant advancing part of life and is a perfect field for those people out there that aren't looking for a routine

job. Technology is also fun. "I love applied tech because we're learning about electricity. The best part is watching other people get zapped," said **Wayne McElhaney**.

Life management, as well, teaches you how to take care of yourself, and it also teaches you how to successfully raise a family.

"This year I took Personal Living where I learned self-respect, how to manage a family on a budget, and just learned more about the basic daily routine," remarked **Michael Erickson**.

Personal Living and other life management classes such as Family Living, and Health all prepare you for the real world. They teach you how to successfully take care of yourself, and they teach you how to raise a family.

Life management classes and technology classes are the classes to take because they help you get a taste of the real world, and what you learn in them can easily be applied to your life, no matter what you become.
